

INDUSTRIAL & MANUFACTURING

Solutions for creating a safe, engaged, and productive workforce

With rising competition for skilled workers and a limited talent pool, it's become more important than ever to focus efforts on creating a workplace experience that leads to higher employee engagement and retention. And for organizations with a large number of frontline and deskless workers, doing so adds a level of complexity to the mix.

Our workplace experience platform unifies teams with access to corporate communications and a set of workplace tools supported by multiple devices that keep everyone connected and engaged. Support the way your employees work whether they're on the factory floor, the front line, in the office, or at home.

Supporting industrial facilities with a unified workplace experience platform

Employee App for Frontline Workers

Provide a central hub for all communications and workplace management tools to connect, inform, and engage deskless workers with the latest news and events, regardless of their location.

Modern Intranet

Bring people and information together with a modern intranet that makes it simple to collaborate with individuals and teams, access forms, and fulfill ongoing safety and training requirements.

Wayfinding

Help employees and guests navigate complex facilities and locate various points of interest with self-service kiosks that provide up-to-date maps, directories, and animated pathways.

Digital Signage & Video Walls

Implement digital signage across your factory floors, locker rooms, cafeterias, and other high-traffic areas to effectively promote your brand, display production metrics, and ensure safety.

Alerts & Broadcasts

Override regular communications with important messages like alerts, policy changes, or upcoming events to several channels at once, including SMS text messaging. Broadcasts can be scheduled manually or triggered automatically by your existing alert system.

Visitor Management

Implement a faster and more modern guest check-in process that is adaptable to your requirements, promotes safety, and comes equipped with a timestamped log of daily visitors and other robust analytics.

Industry Content

Tap into off-the-shelf content relevant to your business. Featuring the latest people and culture topics, safety standards, and best practices for customer service, Appspace Industry Content helps your employees stay safe and productive.

Space Reservation

Enable employees to reserve shared resources — conference rooms, workspaces for back office workers, and even parking spaces — onsite using self-service scheduling devices or remotely using the Employee App.

“Appspace has helped us to more effectively distribute messaging to the workforce, and the new channel has resulted in increased employee engagement.”

– Derran Smith, VP, Commercial Operations and Strategy
Industrial Technologies Group & Metal Processing Group

Enhanced Services

Whether you have a pressing deadline, a custom request, or just need to move quickly, our team of experts is on hand. Let us help steer you in the right direction, enable your team, and deliver that extra wow factor.

Services are broken into five categories:

Quick Start & Platform Training

Industry-specific resources to design, build, and manage a successful implementation.

Advisory Services

Consultative services for ongoing design, development, and operations.

Integrations & Dashboards

Expertise in planning and successfully integrating Appspace with your unique tech stack.

Custom Solutions

Leverage our team for custom cards, advanced wayfinding solutions, implementation, and migration services.

Managed Services

Industry-specific strategy, resources, and people to build, develop, and run Appspace for you.
