APPSPACE FOR NEW OFFICES

Unleash your new space's full potential

Creating a state-of-the-art office that appeals to everyone requires care and attention. It's about going beyond employee expectations and making sure they've got the technology and resources they need to succeed and thrive.

At every phase of the commercial construction process, Appspace can help you create a space that draws your remote employees back to the office. And whether you're expanding or downsizing, our technology can help you build a smarter, more efficient workplace that becomes the preferred place to work.

APPSPACE

Mapping out your physical workplace

Creating the best possible experience at your new facility starts with your floor plan. How will rooms and workspaces be laid out? How many people does the office need to accommodate? How will people use the office space? Our Workplace Management solutions can help you answer all of these questions.

No matter the scenario, we can help provide an exceptional in-office experience at your new facility:

- **Expansion/Growth:** Your organization is adding new buildings
- **Remodels:** Your organization is redesigning the existing facility
- **Relocation:** Your organization is moving from one site to another

IWMS Integration

Quickly and easily upload your floor plans into Appspace to map out reservable spaces in your new building and help make the change management process smoother.

Space Reservation

Enable your employees to find the perfect meeting room or workspace in your new building with the ability to create and manage all reservations from their phone or computer.

Visitor Management

Implement a fast, modern check-in process for guests visiting your new facility. Promote safety and adhere to your organization's policies with customizable checkpoints and timestamped logs.

Wayfinding

Help your employees and visitors navigate the new space with an interactive kiosk experience that quickly locates conference rooms, desks, restrooms, and other points of interest using animated pathways.

Reporting & Analytics

Understand how people are using your new facility, along with its resources and amenities. With access to reporting and analytics, you'll have the insights you need to make better data-driven decisions.

Connecting your people

A new office space can mean a new working dynamic for employees. That means focusing on workplace communications, which play a big role in the physical office experience.

Appspace's Workplace Communications solutions ensure an omni-channel approach to your communication strategy that keeps your workforce connected and creates a workplace your employees love. Create content once and publish it everywhere – to the Employee App, Appspace Intranet, Slack, Webex, Microsoft Teams, on digital signage across the office.
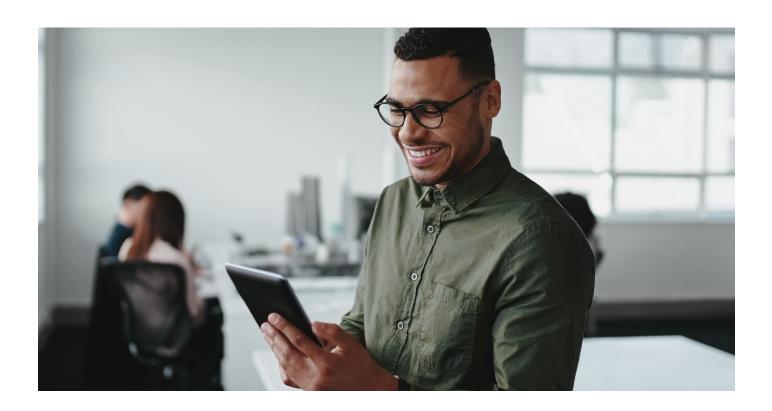

Digital Signage

Display information about the new office space, such as floor plans, construction progress, and move-in dates. Once your new space is ready, use digital signage to elevate your grand opening and ensure safety with the ability to trigger and broadcast emergency alerts across multiple channels.

Employee App

Communications extend far beyond just the physical workplace. Reach your remote and frontline workers with updates around the new build and other important news using our Employee App. Get your workforce buzzing about the new office with social features and allow them to reserve spaces remotely ahead of your grand opening.

Building a smarter workplace

While ping-pong tables and fitness rooms can help make an office space more attractive to prospective and existing employees, these perks aren't enough to keep everyone fully engaged. The most innovative companies get that – and it's why they're turning to smart building technology for that extra wow factor.

Through Appspace's IoT partner integrations, organizations can connect facility data and the workplace experience. Occupancy sensors, for example, offer powerful possibilities – like automatically booking the room you walk into if it's available, turning the power on after checking into a workspace, or displaying an air quality index on room booking panels so people can find a healthy place to meet.

Common use cases:

- Measure and display air quality on digital signage devices
- Adhere to capacity limits with room capacity sensors
- Use digital signage to indicate a room or workspace is ready to be cleaned
- Use docking stations to detect if a reservation exists when the employee connects their PC

"Working with Appspace has helped Insight improve our workplace experience and collaboration while minimizing the workload on IT and user teams. Their platform's multi-faceted approach has met our needs to increase communication channels and help bring employees back to the office."

– Matt Skaff, Vice-President of IT
